

As Support for our Sales Team in UK we want to recruit several

(Senior) Application Engineers (m/f) Manufacturing - UK

The position supports sales by providing deep technical expertise to help achieve our revenue goals. He/she collaborates closely with Stratasys sales team, resellers, and technical support resources in the region and in the headquarters, in order to identify opportunities, provide technical consulting, transfer technical knowledge to our partners, and ensure deals include solutions that accurately address customer needs, and are appropriately supported by key customer technical decision-makers, with special focus on the manufacturing market. Based in UK this person will also provide support to the rest of our territories.

Main Tasks:

- Collaborate with our partners and Strategic Account managers to identify opportunities, and advance and close sales, by using their technical expertise with a proactive approach
- As responsible of the application and solutions know-how of our channel partners, provide training and on-site coaching to channel partners in order to enhance their application knowledge, technical acumen, technical solutions sales skills, and selling against know-how, with special focus on Presales & Application Specialists
- Be the key technical knowledge resource to support our counterparts during the sales process through e-mail, phone, on-site visits
- Support events, conferences, and fairs

Qualifications:

- Engineering degree in Mechanics, Manufacturing, Chemistry, Aerospace or similar
- Five or more years of experience in a technical or sales support role in the manufacturing industry
- Deep knowledge of manufacturing techniques, and manufacturing industry processes
- CAD design capabilities desired
- Excellent communication and interpersonal skills
- Fluent in English, more languages preferred
