

desk2go

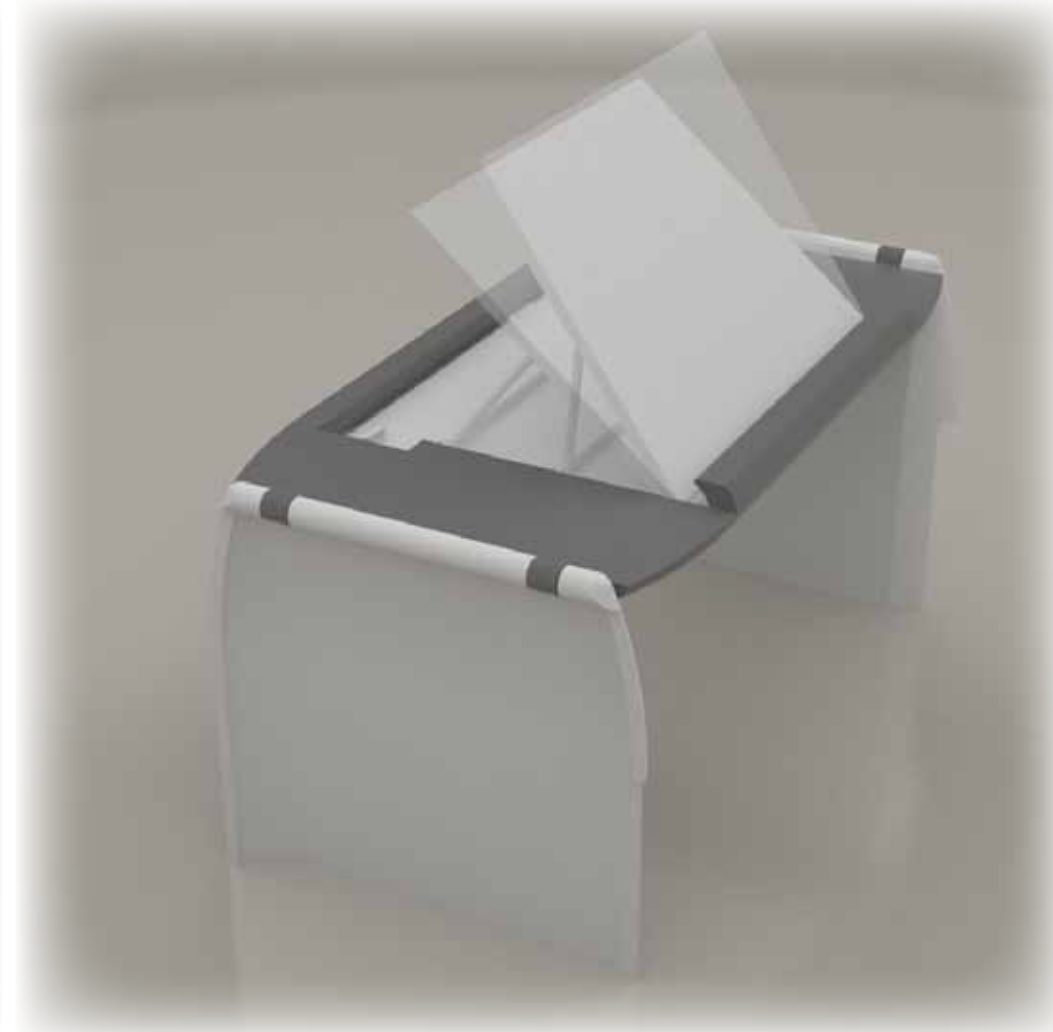

THE PROBLEM: There is an inherent problem with the concept of a laptop. It is unsafe to use on your lap. Current laptop design with heat management on the bottom often gets blocked and causes the laptop to overheat which may cause health issues and poor performance. The desk2go aims at solving this problem.

In the closed position, desk2go allows you to comfortably, conveniently, and safely carry your laptop anywhere.

In the open position, desk2go makes using your laptop while sitting on the floor, on a chair or on the subway an enjoyable experience.

increase the angle of inclination on desk2go for a comfortable and easy way to use you laptop in bed. Handsfree!

With desk2go, your laptop case becomes a collapsible, portable desk. Its safe platform provides a rigid, desk-like surface which prevents the laptop from overheating while allowing you to use it comfortably, virtually anywhere. The adjustable platform makes it easy to use the laptop in situations where the absence of a desk would make it uncomfortable and inconvenient; such as sitting on the couch, sitting down on the floor and even while lying down in bed.
